

George Fuller,

Professional Certificate in Accounting

Masters in Mathematics

After having graduated with a MA honours in mathematics in Scotland, George appreciated the critical dependence of how vital understanding accounting is in today's professional business world. To utilise his mathematical ability and apply it in a business sense seemed the most logical progression for him. George came to York from the UK to study for a Professional Certificate in Accounting. It was the fact that York offered a program where you can go at your own pace and obtain international accounting knowledge that drew him to York. With hard work and persistence, he has obtained his certificate in two years with zero prior knowledge of accounting. What George has acquired here at York will serve him for the rest of his professional life. He returns to the UK as a student who can really offer more as a graduate. We wish him luck in pursuing his accounting designation and all future endeavours.

Advice you'd give students fresh out of university?

Let people know who you are, hit the ground running and possibly think about getting a haircut.

Things you wish you'd done in university, but didn't?

Get more involved, York has so many opportunities in many facets.

Favourite quote or motto you live by?

"Seize the day"
